

Asia Sustainable Infrastructure Advisory (“ASIA”) Panel

Singapore is establishing the Asia Sustainable Infrastructure Advisory (ASIA) Panel to build the region’s knowledge and awareness on sustainable infrastructure by sharing the latest trends, ideas and best practices. As a regional hub for sustainable infrastructure, Singapore seeks to build on these strengths to accelerate the development of sustainable infrastructure in the region.

A panel of international experts on sustainable infrastructure will share their economic and financial perspectives on topics across the entire infrastructure value-chain, from the planning, design, and construction, to the operation and maintenance of projects. This would enable more collaborations and business opportunities for regional sustainable infrastructure.

OBJECTIVES

Exchange the latest thinking and best practices

on sustainable infrastructure and communicate new ideas to the regional infrastructure community.

Provide insights and feedback on initiatives

that Singapore intends to pursue pertaining to sustainable infrastructure and recommend focus areas, based on global trends.

Promote private sector opportunities

to support Asia’s sustainable infrastructure development.
